

Fiber Stripper

Fiber Stripper has large strip notch at the tip of the tool is used to remove 1.6mm to 3.0mm jacketing. The middle strip notch is used to remove 600um to 900 um buffer. The smallest strip notch is used to strip the 250um coating to expose the 125um fiber cladding. The tool also has an easy-grip ergonomic handle and a closing latch to protect the stripping surface when not in use.

Features

- Soft plastic-cushioned handle grip, and super accurate hardened stripping jaws, ensuring smooth clean stripping action.
- Consistent quality of stripping.
